PROFESSIONAL SUMMARY

A qualified Chartered Accountant who has made a deliberate and purposeful transition into the world of software engineering and artificial intelligence. Combining a rigorous analytical foundation built in financial practice with hands-on technical skills in modern web development, I bring a rare dual perspective — the precision and structured thinking of an accountant fused with the problem-solving creativity of a developer.

I am currently deepening expertise in full stack web development and exploring the frontier of machine learning and AI systems, with the goal of building intelligent, data-driven solutions that bridge the gap between business insight and engineering execution.

TECHNICAL SKILLS

Programming Languages

- HTML
- CSS (Both Vanilla and Tailwind)
- JavaScript
